

Caribou Biosciences to Participate in Upcoming Investor Conferences

February 1, 2023

BERKELEY, Calif., Feb. 01, 2023 (GLOBE NEWSWIRE) -- [Caribou Biosciences, Inc.](#) (Nasdaq: CRBU), a leading clinical-stage CRISPR genome-editing biopharmaceutical company, today announced Rachel Haurwitz, Ph.D., Caribou's president and chief executive officer, is scheduled to participate in the following investor conferences:

- **Guggenheim Oncology Conference 2023**, New York City
February 9, 2023, 10:45 am EST
[Webcast](#)
- **SVB Securities Global Biopharma Conference**, virtual
February 14, 2023, 5:00 pm EST
[Webcast](#)
- **Citi's 2023 Oncology Leadership Summit**, virtual
February 22, 2023, 2:00 pm EST
Webcast to be made available on [Events](#) page

For more information, visit the [Events](#) page on Caribou's website. Webcasts will be available on the Caribou website for 30 days after the event.

About Caribou's Novel Next-Generation CRISPR Platform

CRISPR genome editing uses easily designed, modular biological tools to make DNA changes in living cells. There are two basic components of Class 2 CRISPR systems: the nuclease protein that cuts DNA and the RNA molecule(s) that guide the nuclease to generate a site-specific, double-stranded break, leading to an edit at the targeted genomic site. CRISPR systems are capable of editing unintended genomic sites, known as off-target editing, which may lead to harmful effects on cellular function and phenotype. In response to this challenge, Caribou has developed CRISPR hybrid RNA-DNA guides (chRDNA; pronounced "chardonnays") that direct substantially more precise genome editing compared to all-RNA guides. Caribou is deploying the power of its Cas12a chRDNA technology to carry out high efficiency multiple edits, including multiplex gene insertions, to develop CRISPR-edited therapies.

About Caribou Biosciences, Inc.

Caribou Biosciences is a clinical-stage CRISPR genome-editing biopharmaceutical company dedicated to developing transformative therapies for patients with devastating diseases. The company's genome-editing platform, including its proprietary Cas12a chRDNA technology, enables superior precision to develop cell therapies that are specifically engineered for enhanced persistence. Caribou is advancing a pipeline of off-the-shelf CAR-T and CAR-NK cell therapies for the treatment of patients with hematologic malignancies and solid tumors.
